

Supporting **DORA** Readiness

MazeBolt helps you meet the Digital Operational Resilience Act (DORA) compliance requirements across all 5 regulation pillars. With MazeBolt's RADAR™ DDoS vulnerability management solution, you have the capability to report effectively regarding the following key DORA requirements:

RESILIENCE TESTING

RADAR conducts the simulation of tens of thousands of distinct DDoS attacks, with no maintenance windows or disruption to online services.

RISK MANAGEMENT

RADAR finds the gaps in your current DDoS protections with continuous attack and vulnerability simulations.

REPORTING

RADAR gives you a potential impact incident analysis on the availability of online services, as well as a complete history of vulnerability identification logs, in case of an audit.

THIRD-PARTY RISK

With RADAR, you have a way to evaluate the efficacy of third-party DDoS mitigation products to ensure service availability, and a means of documenting and reviewing vulnerabilities. RADAR is the only solution for testing DDoS protection solutions continuously.

INFORMATION SHARING

MazeBolt established partnerships with top mitigation vendors and can offer you a proactive approach to fixing issues that have been identified.

Assess Your DDoS Vulnerability Rating Today with Our Free DDoS Threat Rating Tool

Once it comes into effect, DORA will impact all organizations in the financial services industry that do business in the EU. Without the right testing and reporting capabilities in place – your organization will be directly in the line of fire.

About MazeBolt

MazeBolt RADAR is a patented DDoS Vulnerability Management solution. Using thousands of non-disruptive DDoS attack simulations and without affecting online services, it can identify and enable the remediation of vulnerabilities in deployed DDoS defenses. RADAR enables organizations and governments to maintain the uninterrupted business continuity of online services. Read more at www.mazebolt.com.
