

Time is Running Out!

DORA Enforcement Starts January 2025

MazeBolt helps you meet the Digital Operational Resilience Act (DORA) compliance requirements across all 5 regulation pillars.

Resilience Testing

RADAR conducts tens of thousands of distinct DDoS attack simulations, with no maintenance windows or disruption to online services.

Risk Management

RADAR gives you full visibility into your DDoS attack surface by finding the gaps in your DDoS protections.

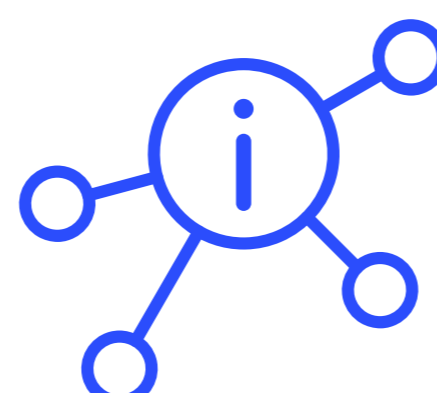

Reporting

RADAR gives you a potential impact incident analysis on the availability of online services, as well as a complete history of vulnerability identification logs, in case of an audit.

Third-Party Risk

With RADAR, you have a way to evaluate the efficacy of third-party DDoS mitigation products to ensure service availability, and a means of documenting and reviewing vulnerabilities. RADAR is the only solution for testing DDoS protection solutions continuously.

Information Sharing

MazeBolt established partnerships with top mitigation vendors and can offer you a proactive approach to fixing issues that have been identified.

DORA comes into effect on January 17, 2025.

It will impact all organizations in the financial services industry that do business within the EU. You will need to have the right visibility and reporting capabilities in place before DORA comes into effect.
